

Commissioning Statement:

Condition or Treatment:	Gastroelectrical Stimulation (GES) / Gastric Neuromodulation
Commissioning position:	Gastric neuromodulation (GNM) has been advocated for the treatment of drug refractory gastroparesis or persistent nausea and vomiting in the absence of a mechanical bowel obstruction. There is, however, little in the way of objective data to support its use, particularly with regards to its effects on gastric emptying.
Referral Guidance:	<p>Gastric Neuromodulation for gastroparesis is NOT routinely commissioned. All requests for this treatment must be sent to the IFR Panel for consideration.</p> <ul style="list-style-type: none"> • HRW/SR GP Practices: https://ifryh.necsu.nhs.uk/ • HaRD GP practices: Referral Form
Effective From:	1 July 2021
